Digital Microform Capture

The Micro-Image Capture 5 is the latest in digital microform image capture technology featuring a high resolution lens & optical sensor allowing for full-size quality viewing, printing and digital capture of 16 & 35mm microfilmed images.

Upgrade your low resolution Image Mouse capture head to create a high resolution W7 ready scanner while utilizing your existing base unit!

Fast Output Distribution

Capture an image with a simple keystroke and save to your PC as a digital file or send to your network printer for a hard copy.

- Configure for single or multiple outputs
- Send to network printer, file folder, e-mail address or ftp site
- Scale images sent to printer
- Auto name file feature or prompt before saving
- Display and capture in B/W, black line, gray scale, color or invert mode
- Capture full screen, area select, drag select or multi area select
- Simple to use graphical user interface

Functionality

Capture software provides for many adjustments to image quality like contrast, brightness, and resolution as well as optical flip, rotate and invert (neg to pos). Send images instantly to your printer, e-mail or to a designated pc folder with one keystroke. Our exclusive multiple output functionality allows for printing, save as image file, e-mail, & ftp outputs that can be configured to activate simultaneously!

Output image format types include PDF, TIFF, JPG, PNG, PSD, BMP, CAL, GIF, CAL, WPG and more.

Our multiple capture options allow for full screen capture, frame capture area selection by mouse drag and multiple capture of selected areas on the same image that combine automatically on one page for print, save or e-mail output functions.
